

TIRE SPECIFICATIONS

1. INDICATION OF SPECIFICATIONS FOR PNEUMATIC TIRES FOR INDUSTRIAL VEHICLES

Ordinary cross-section industrial vehicle tires

6.50 - 10 NHS

Low profile industrial vehicle tires

12 - 16.5 NHS

Wide cross-section industrial vehicle tires

28 x 9 - 15 NHS

Metric Series Tires

355 / 65 - 15 NHS

2. PNEUMATIC TIRE RIMS SOLID TIRE SPECIFICATION EXPRESSION METHOD

Ordinary cross-section solid tires

7.00 - 12 / 5.0

Wide section solid tires

27x10-12/8.0

Metric series solid tires

200 / 50 - 10/6.5

3. PRESSURE-MATCHED SOLID TIRE SPECIFICATION REPRESENTATION

Inch Series Solid Tires

28 x 12 x 22

Metric series solid tires

425x150x305

PNEUMATIC TIRES FOR INDUSTRIAL VEHICLES

OB-502 TIRE SPECIFICATIONS AND TECHNICAL PARAMETERS

(Deepened block pattern, standard for internal combustion forklifts)

ALL-STEEL RADIAL INDUSTRIAL VEHICLE TIRES

All-steel radial industrial vehicle tyres are for low-speed, high-load industrial vehicles, with long service life, high safety factor, high wear resistance, tear resistance, fatigue resistance and other characteristics. Tires widely used in various industrial vehicles with reasonable structure design and beautiful appearance.

- Wide, deep and robust tread design
- Excellent all steel elastic casing
- High turn-up and unique reinforced sidewall
- Excellent traction, stability and handling safety
- Excellent tread compound with all steel belts provide outstanding wear resistance and longer service life.

PNEUMATIC TIRES RIMS SOLID TIRES

- Good puncture and wear resistance.
- Low rolling resistance and energy saving.
- Low heat build up and long operating life.
- Highly resilient tire body and good riding comfort.
- Low center of gravity and good riding safety.
- Tight fitting of tire with rim.

The British technology is used for all listed tire sizes and the products' features and characters conform with Chinese GB, American TRA, European ETRTO and Japanese JATMA standards.

The company can develop and manufacture the standard tire sizes which are not listed, non marking white(colored) solid tires and non standard tire sizes according to customers' specific requirements.

The solid tire is one of low speeding and high loading industrial tires and characterized by its long operating life, good riding safety and wear, puncture and fatigue resistance and maintenance free property. Solid tires are widely used for various industrial vehicles, engineering machineries and the tows and trailers operating in harbors, airports, railway stations, factories, minings and various loading and unloading places.

PRESSURE-MATCHED SOLID TIRES

Press-on Band Tyres

A Press-on tyre is made of rubber bonded to a mild steel band which is pressed as an interference fit onto a wheel. The steel band is a mild steel strip which is rolled, welded and expanded in-house by Watts wheel division. Adhesion between the steel band and the rubber is achieved by applying special adhesives. GTC is a world leader in Press On Band technology offering an extensive range of styles and tread pattern options. Particular design emphasis is placed on producing tyres with a large footprint area. Square profile, low heat build up and low rolling resistance.

Features and Benefits

- Puncture proof
- High load capacity
- Square tread profile ensuring good stability
- Low rolling resistance at no extra premium reducing energy/fuel consumption

Applications

Applicable to various forklifts and lifting vehicles which are widely used in airports, entertainment places, coal minings, construction sites, container loading places, factories and enterprises, foodstuff/beverage factories, cast plants, glass manufacturers, garbage disposal plants, freight transport and handling, army units, harbors, scrap recycling stations, iron and steel works, timber processing plants and warehouses, etc.

SAFE AND FLATPROOF TIRES

Safety Blast Tire Structures

WITH SAFETY BLAST TIRES, YOUR TIRES WILL:

- Safety**
 - Avoiding the danger of lost control because of sudden tyre flat.
 - Stable driving in the conditions of tough road and overload.
 - Enhancing the vehicle's stability which enables to remain moving even if the tyre flat.
- Economical**
 - Increasing the Performance life by one to two times as compared with pneumatic tyres.
 - Improving the efficiency.
 - Decreasing Largely the maintenance cost.
- Excellent Capability**
 - Prolonged performance life due to excellent heart resistance.
 - Best quality assurance.
- Universality**
 - All of the pneumatic tyres can be changed to the run flat tyres
 - Tyres design according to the client's request
 - Flatproof tyres of "ADVANCE" brand in conformity with Chinese Standard,TRA,ETRTO and JATMA.

The utility of safety run-flat tires

Even if tyres are driving in the most abominable and dangerous conditions, the vehicles equipped with flatproof tyres can roll over acute-objects such as scrap irons nails, rocks etc. Indeed the tyres even when shot by automatic rifle AK47 also can move on.

Features of Safety Blast Tires

- Driving comfortably-decreasing the tiredness of driving and improving the efficiency of driving.
- Characterized by excellent damping property-preventing equipment from injure by shaking
- Stable driving property-supporting greater load improving stability, increasing traction.
- Avoiding the risk of air leak and blowing out.
- Wider contact area, characterized by big traction in soft and muddy road service.
- Good endurance, all-weather property, unaffected by extreme temperature.
- Reducing cost in maintenance-reducing tyre rupture and expansion of blot hole, driving comfortably, as pneumatic tyre hardness value 8
- Economical-Saving cost in maintenance and downtime.

PNEUMATIC TIRE RIM SOLID TIRE ASSEMBLY DIAGRAM

Easi-Fit Tire assembly schematic

WARNINGS:

Solid tires should never be assembled with grease-based substances on the tire and rim, which can cause abnormal damage to the tire. It is recommended to use diluted soapy water to properly coat the inside of the tire and the outside surface of the rim.
